

Acumatica With AgriDimensions

The Cloud ERP for the Plantation Industry

Acumatica with AgriDimensions (AgriD) provides the best enterprise management solution for transforming your plantation company to help it thrive in a new digital economy.

AgriD is built on Acumatica's future-proof cloud platform with unlimited user licensing and open APIs for scalability, ease of use, and true end-to-end integration for your entire plantation's operations. With this rapidly adaptable platform, you have the power to structure and scale your entire business' development lifecycle.

From land development, nursery and planting activities, pest & disease control, fruit & plant care operations, contract grower management, harvesting and packaging, sales & marketing, and financial management, Acumatica with AgriD manages them all anytime, anywhere, and on any device.

Acumatica with AgriD will help you ensure that: plantation activities and costs are on time and on budget; pests & diseases are controlled; fruit and plant quality are top notch; and operational excellence is achieved. This is designed for how 21st century plantation businesses operate today and in the future. Acumatica with AgriD, Connected Business, Delivered.

AgriDIMENSIONS

Stay Ahead of the Market and Lead with Confidence

Maximize Production and Reduce Operating Costs, While Ensuring Fruit/Plant Quality

Increase Production – Track and measure your plantation operations. This tool can help you optimize water & fertilization/chemical resource use via options that can improve field work orders, track weather forecast and how they can affect your work flows, and manage pest & disease outbreaks faster.

Control Project Costs - Market conditions rapidly change and they always bring cost implications to your projects. Ensure that costs stay within budget, or accurately anticipate when they won't. Timely information ensures your company can grow profits with confidence even through difficult times.

Business Intelligence – Gain actionable insights through dashboards that give a 360° view of your entire operation. This will help you track real time trends and analyze corporate KPIs for better, informed decision making.

Proactive Financial Management With Ease

Develop Budgets and Forecasts, Simplify Cash Management, Provide Accurate & Auditable Tax Reporting, and Enforce Audit Controls

Integrated Financial Management - Monitor annual budgets, determine incoming risks, and spot potential investments across all parts of the plantation.

Control Cash Flows - Get an integrated view of your cash position for real time and up-to-date reporting. You can accurately forecast trends that incorporate detailed cash transaction statistics on demand. That way, you can predict your future cash needs across all modules, currencies, and subsidiaries.

Simplify Tax Reporting - Eliminate the headache of managing different rates, dates, and amounts. Instantly perform common tax calculations accurately.

Increase Productivity - Close books faster with time-saving automations and workflow. Consolidate financial reports across multiple business entities. Automate reporting, consolidation, payments, and cash management between entities.

Pro-Active Project Management, Empowered Contract Growers & Operational Excellence

Manage land infra development projects and contract growers while ensuring crop protection standards are followed

An ERP and Project Management Tool that Works Together

- From land development and field infrastructure projects, keep your projects on time and track your costs as granular as you want it. Track contractor delays, project budget versioning, and easily create post-project budget evaluation and analysis.

Empower Contract Growers

- Empower your contract growers by giving them access to the portal where they can see their up-to-date project budget performance, report pests & diseases, record all work done on a location in the field, and request cash advances and materials issuances from your company. Efficiently generate statements of accounts for contract growers based on actual harvest and accumulated costs/payables.

Synchronized HQ to Field Operations - Easily schedule & manage all your field work orders according to weather changes. Field activities instantly update project costs, and financial implications are recorded automatically.

Soil and Fertilization Management - Record soil & tissue analysis results for every location, prepare a fertilization plan based on soil analysis data, and adjust them accordingly as new soil nutrient data arrives. Visualize the performance of each location's fertilization plan based on a target standard and actual soil test results in a given span of a time.

Pest & Disease Management - Equip your staff and contract growers with mobile applications. These can let them send reports containing the GPS location and pictures of actual pest/disease incidences within the plantation for immediate control/remediation activities. Visualize these pest/disease reports on a map to help in analyzing how far it has spread, and issue work orders to head off the spread to other locations

Customer friendly Tech Leadership on the Cloud

Modular Cloud Platform, Flexible Deployment, Full Data Transparency, Open APIs, Enterprise Cloud Level Security

Data Ownership - Unlike other vendors who lock you in to their datacenter, with Acumatica you decide where to host your data: on the public cloud, in a private cloud, or on-premises. With Acumatica, your data is always secure and always in your hands. You can also do a full relational database export at any time — even if you want to take it somewhere else.

Adaptable - The platform of choice by leading ERP providers across the globe. The mobile framework mirrors code-base changes, and there are open APIs for ease of integration. It's so simple that low code/ no code customization is possible. You can also set role-based views and dashboards.

Modern Security - Enterprise-grade security features such as server-side logic, detailed access controls, and robust authentication are built in.
