

Acumatica With AgriDimensions

The Cloud ERP for the Poultry Industry

Acumatica with AgriDimensions (AgriD) provides the best enterprise management solution for transforming the poultry industry to thrive in a new digital economy.

AgriD is built on Acumatica's future-proof cloud platform with unlimited user licensing and open APIs for scalability, ease of use and true end-to-end integration for your entire poultry operations. With this rapidly adaptable platform, you have the power to structure and scale your entire poultry operations and business lifecycle.

From feed production, hatchery & incubation activities, growing operations, contract grower management, dressing plant operations, processed food production, sales & marketing, to financial management, Acumatica with AgriD manages them all on any device - anywhere.

Acumatica with AgriD ensures the operational excellence of even the most vertically integrated poultry-based company. Designed for how 21st century poultry-based businesses operate today and in the future.

Acumatica with AgriD, Connected Business, Delivered.

Stay Ahead of the Market and Lead with Confidence

Maximize Production, Reduce Operating Costs, While Ensuring Livestock Health & Meat Quality

Increase Production – Track and measure your hatchery & growing operations. Optimize feed consumption and livestock health with tools to improve data collection and analysis, project cost allocation & forecasting, and manage disease outbreaks faster.

Control Project Costs - Market conditions rapidly change and they always bring cost implications to your production.

Ensure that costs stay within budget or accurately anticipate when they won't. Timely information ensures your company can grow profits with confidence even through difficult times.

Business Intelligence – Gain actionable insights through dashboards that give a 360° view of your entire vertically integrated operation. Track real time trends and analyze corporate KPIs for optimized decision making.

Proactive Financial Management With Ease

Develop Budgets and Forecasts, Simplify Cash Management, Provide Accurate & Auditable Tax Reporting, and Enforce Audit Controls

Integrated Financial Management - Monitor annual departmental budgets, determine incoming risks, and spot potential investments across all parts of the company.

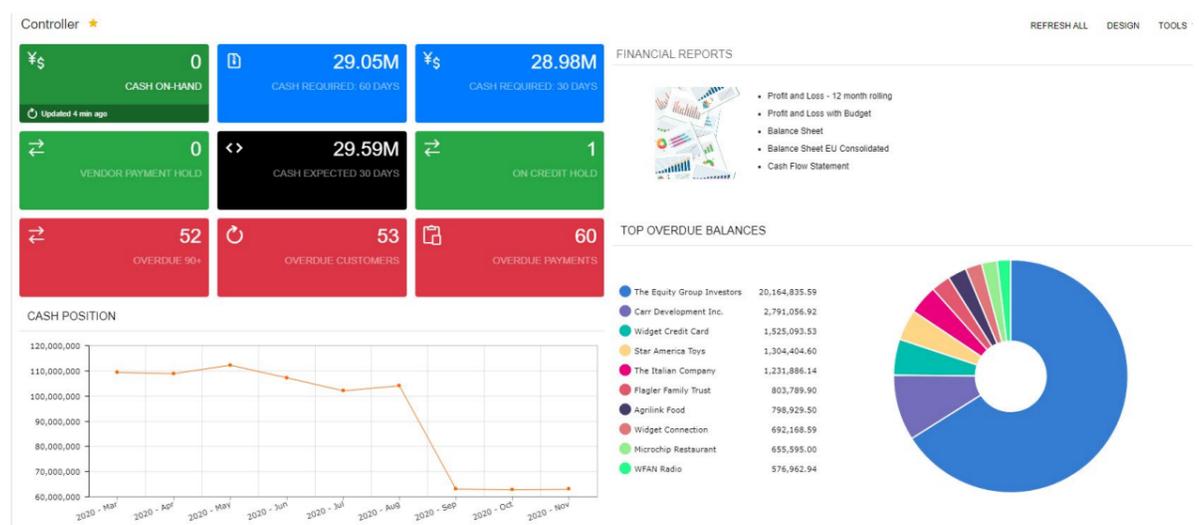

Control Cash Flows - Get an integrated view of your cash position for real time and up-to-date reporting. Accurately forecast trends that incorporate detailed cash transaction statistics on demand. Predict your future cash needs across all departments and subsidiaries.

Simplify Tax Reporting -

Eliminate the headache of managing different rates, dates, and amounts. Instantly perform common tax calculations accurately.

Increase Productivity -

Close books faster with time-saving automations and workflow. Consolidate financial reports across multiple business entities. Automate reporting, consolidation, payments, and cash management between subsidiaries and affiliates for your entire group of companies.

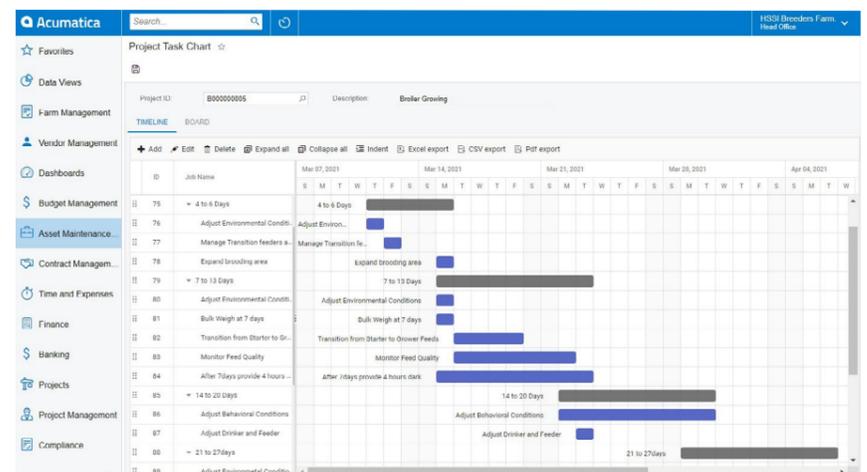

Pro-Active Project Management, Empowered Contract Growers & Operational Excellence

Manage Capital Projects and Contract Growers while Ensuring Livestock Health & Quality Standards are followed.

An ERP and Project Management Tool that

Works Together - From land development and feed mill & dressing plant infrastructure projects, keep your projects on time and track your costs as granular as you want it. Track contractor delays, project budget versioning, and easily create post-project budget evaluation and analysis.

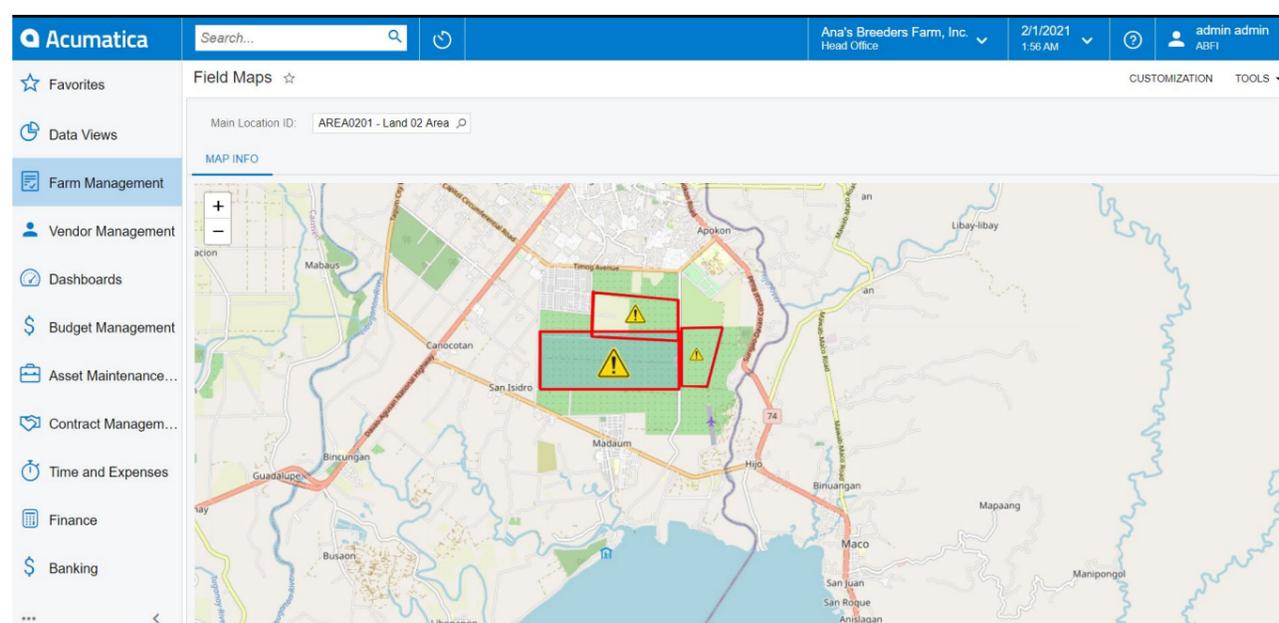

Empower Contract Growers

- Empower your Contract Growers by giving them access to a portal where they can see their up-to-date project budget performance, report pests & diseases, record all work done on a location in the farm or the manufacturing plant, and request cash advances and materials issuances from your Company. Efficiently generate statements of accounts for Contract Growers based on actual harvest and accumulated costs/payables.

Synchronized HQ to Field Operations - Easily schedule & manage all your field work orders according to environmental & technology changes. Field activities instantly update project costs and financial implications are recorded automatically.

Feed Consumption Management - Record feed consumption and bird weight gain ratios for every location, prepare a feeding plan based on feed conversion ratios and specific bird breed performance standards and adjust them accordingly as new data arrives. Visualize the performance of each location's bird growth based on a target standard and actual measurements.

Pest & Disease Management - Equip your staff and contract growers with mobile applications for them to report the GPS location and pictures of actual pest/disease incidences within the farm for immediate control and remediation activities. Visualize these pests and disease reports on a map to help in analyzing how far it has spread and issue work orders to head off the spread to other locations.

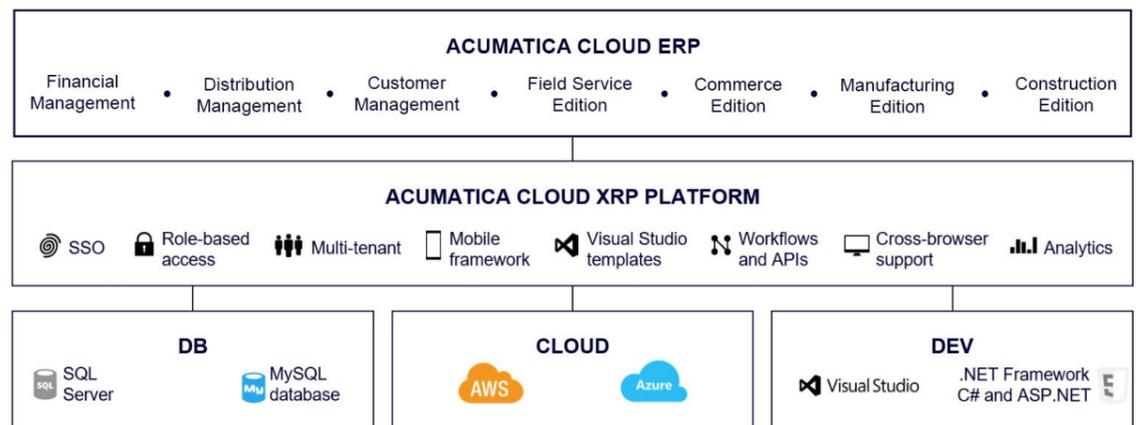

Customer friendly Tech Leadership on the Cloud

Modular Cloud Platform, Flexible Deployment, Full Data Transparency, Open APIs, Enterprise Cloud Level Security

Data Ownership - Unlike other vendors who lock you in to their datacenter, with Acumatica you decide where to host your data: on the public cloud, in a private cloud, or on-premises. With Acumatica your data is always secure and always in your hands. You can do a full relational database export at any time —even if you want to take it somewhere else.

Adaptable - The platform of choice by leading ERP providers across the globe; mobile framework mirrors code-base changes; Open APIs for ease of integration; low code/ no code customization; role-based views and dashboards.

Modern Security - Enterprise-grade security features such as server-side logic, detailed access controls, and robust authentication are built in.
